

## NEW PILE INTEGRITY TESTER FROM PILE DYNAMICS, INC.

Pile Dynamics Inc. has announced the launch of a re-engineered Pile Integrity Tester™ (PIT) that is faster and easier to use than previous models, and includes many new features. As always, the PIT provides an inexpensive and quick means of evaluating potentially costly defects in augercast piles, drilled shafts, driven concrete piles, concrete filled pipes and timber piles. Test data collected with the new PIT is of extremely high quality, due to reduced noise electronics and a higher analog to digital sampling rate. The new PIT has a large high resolution touch screen, allowing for clearer data screen plots and more precise finger control. A built-in PCMCIA memory card results in more storage and quicker data access and transfer. This testing device is available in two models, F and FV. For more information, contact Pile Dynamics, Inc. at 4535 Renaissance Parkway, Cleveland, OH, USA, phone +1 216 8316131, fax +1 216 831-0916, [info@pile.com](mailto:info@pile.com) or visit the website [www.pile.com](http://www.pile.com).
