

# Pile driving analyzer goes remote, so you don't have to

Pile Dynamics Inc. debuts a new model of pile driving analyzer, the PDA model PAX. The portable, battery operated model weighs 10 lb., and its display lights up with extreme high visibility in all lighting conditions. Most important, it has a remote data transmission capa-

bility via broadband Internet, to handle comprehensive monitoring and analysis in real time.

So engineers can stay in the office, while the instrument goes to the

test site. Those who elect to be on site can take full advantage of the product's capability as a computer, with access to all variables of interest and direct link to CAPWAP software. Clients will enjoy test scheduling flexibility.
