
Dynamic load testing of deep foundations via broadband

A new model of a pile driving analyzer from Pile Dynamics Inc., the Model PAX, is a portable, battery-operated model that weighs 10 lbs. Its display doubles as a control panel and keyboard, and it offers high visibility in all lighting conditions. The device offers remote data transmission capability via broadband internet, with PDA software used to monitor the load test in an office computer, giving clients test scheduling flexibility and no problems with travel or weather delays. The field crew has a simple software interface and straightforward mode of operation.
