Pile driving analyzer

A new model of pile driving analyzer is now available from Pile Dynamics. The PAX is portable, battery operated, and weighs only 10 pounds. Its display doubles as a control panel and keyboard and has high visibility in all lighting conditions. The unit features remote data transmission capability via broadband Internet technology. An office computer running PDA-W and receiving data gives the engineer the ability to perform comprehensive monitoring and analysis in real time. In local mode, the unit performs as a PDA coupled with a personal computer, giving the field engineer access to all variables of interest in real time.

Circle 70 on reader card.
