

Pile Dynamics Wins Manufacturing Innovation Project Award, Collaboration with NASA

The Thermal Integrity Profiler, by **Pile Dynamics, Inc.** (PDI), is among the winners of a Manufacturing Innovation Project Award. The award is conferred by a partnership comprising the City of Cleveland, OH; Cuyahoga County (where PDI is located); the Manufacturing Advocacy & Growth Network; and the NASA Glenn Research Center. PDI was one of nine manufacturers selected by an independent panel of judges to work with NASA scientists on incorporating NASA technologies into their products. The collaboration with NASA will allow PDI to explore use of Thermal Wires™, which are wires built with embedded sensors. The Thermal Integrity Profiler can use Thermal Wires, but mainly uses a thermal probe to measure the temperature of concrete as it cures to evaluate its integrity.
