

PILE-DRIVE ANALYZER: New Interface for Simpler Calibration

The redesigned SPT Analyzer is designed for monitoring calibrated standard penetration test rigs in deep soil prior to the laying of deep foundations. ASTM and many

state transportation department regulations require the periodic calibration of SPT rigs, and the SPT analyzer gives instant feedback on the performance of rigs. This updated model has a simplified interface for easier use, with a bright color touch screen. Battery life has been extended to eight hours of continuous functionality. **Pile Dynamics Inc.;** 216-831-6131; www.pile.com
