## Pile Dynamics Receives Thanks for Educating Geotechnical Engineers

ADSC Technical Affiliate Member, **James H. Long**, Department of Civil Engineering at the University of Illinois, recently wrote a letter to ADSC Associate Member firm, Pile Dynamics, located in Cleveland, Ohio. It's this kind of cooperation between ADSC members that makes our association so effective.

"For the last several years, you allowed me to download the educational version of (GRL)WEAP for use in my graduate

class on deep foundations. This year I have ten students in the class. They all use (GRL)WEAP as part of the class to understand and quantify the effects of pile driving. (GRL)WEAP is such a useful tool. We are fortunate indeed that you make it available to us. Please pass along my gratitude to all the decision makers that control this policy. Thanks again."
