

Cross hole analyzer

Pile Dynamics launched a small, powerful Cross Hole Analyzer for quality assurance of drilled shafts. The device retains all testing functionality of the previous model at a third of the size and half the weight, and incorporates touch-screen technology. The analyzer features a sampling rate 12 times higher, resulting in superb data acquisition and a battery that may last an entire day. Testing accessories were enhanced and include shorter probes in brass housing, stronger detachable cables, and an improved depth encoder wheel. Everything fits in a single carrying case for easy transport.
