

Concrete products and services

The cement shortages of 2007 are behind us, and demand is currently down. However, the federal stimulus package is projected to increase demand for concrete and related products (...)

Champ by **Pile Dynamics, Inc.** (www.pile.com) performs Crosshole Sonic Logging in drilled shafts and is also used to perform Single Hole Sonic Logging in augured cast-in-place piles.

The test performed with the Champ assesses the quality of the concrete of the foundation. Data obtained with the Champ may be analyzed by tomography imaging to help visualize potential shaft defects.
