

# New Cross Hole Analyzer for construction market

Pile Dynamics, Inc.'s new Cross Hole Analyzer (CHA) is small yet powerful device that retains all testing functionality of the previous CHA model at one third of its size and half its weight, and also incorporates the touch-screen technology that has been popular with users of Pile Dynamics' other foundation testing instruments.

This new CHA model features a sampling rate that is 12 times higher, resulting in good data acquisition, and a battery that lasts through an entire day of testing. The smaller CHA and all its sensors and cables fit in one single transporting case, thus making it easier to transport it to the job site.

Pile Dynamics, Inc. is a global manufacturer of quality assurance systems for the deep foundations industry. ■
