Smaller, wireless Pile Integrity Tester

Pile Dynamics has recently launched the PIT-X, a Pile Integrity Tester that fits in the palm of hand, and works with a wireless accelerometer. All functions available on the latest edition of the PIT-V model have been preserved, including a built-in Fast Fourier Transform (FFT) feature that is particularly helpful to detect the length of short foundation elements in the field.

PDI has also updated the PIT post processing/data analysis software, PIT-W, having recently launched PIT-W 2009 in both Standard and Professional versions. ■

Enquiry: info@pile.com

The new PIT-X is smaller and features a wireless accelerometer.
