

A PDA-8G withstood a Near Miss in Wisconsin

PDI's Pile Driving Analyzer® (PDA-8G) took the brunt of a near miss onsite in Wisconsin. No one was injured in this incident, and the ruggedness of the PDA-8G allowed the testing to be completed. The shattered screen and banged up housing will be replaced and sent back out into the field.

"...this is one for the books. This was a real test of the 8G ruggedized housing... will be completing restrikes remotely next week with it before going in for repair."

- Bob Meyers, P.E., Senior Consultant, Geotechnical | Inter-Mountain West Division, [Terracon](#)
