

Pile installation recorder speeds construction and saves money

Pile Dynamics offers the PIR-A recorder to provide the rig operator with installation guidance by displaying accurate grout volume pumped vs. depth information. Meant to reduce construction time and cost, it objectively monitors pile installation. Rig mounted, it can adapt to any type of rig configuration, swinging or fixed leads, and is priced to pay for itself in short order. Simple to use, it meets all Deep Foundations Institute Augured Cast-in-Place Pile Manual guidelines.
