

Monitoring Device For CFA Piles

Pile Dynamics Inc. has released a handheld WIFI device that enables a supervisor to see, in real time, the information that is displayed on the Pile Installation Recorder (PIR), its automated monitoring equipment for augered cast-in-place/CFA piles. While the PIR is mounted in the cabin and shows all parameters needed to help the operator build the pile to specifications, PIR-Viewer lets an inspector stop installation if there is an area of concern. Pile Dynamics Inc., **Card No. 209**
