Cloud Capabilities for Thermal Integrity Profiling

*Innovative and secure wireless technology for dependable data collection*

Reliable. Convenient. Innovative.

Pile Dynamics' Cloud portal securely stores project data for Thermal Integrity Profiling (TIP) tests. This technology was developed for quick, convenient access to project data during and after testing. The TIP software helps identify areas of concern such as potential necking, cage alignment irregularities, or over-pour bulges. Having access to this data in real time during the hydration period offers the opportunity to identify potential construction issues far earlier than other integrity test methods.

PDI's secure Cloud portal is available to authorized users at any time, from any location. This allows access to the data from anywhere in the world where an Internet connection is available. Data in the PDI Cloud portal is only visible to users with proper authorization.

With each TIP project, the corresponding data is entered in the TIP main unit and duplicated in PDI's Cloud portal. Many projects can be listed under one client and can easily be sorted by project date or name.

PDI's Cloud portal capabilities are available for all TIP projects. To learn more about Thermal Integrity Profiling or PDI's Cloud portal, please visit www.pile.com/products/tip.

Pile Dynamics, Inc. (PDI) is the world leader in developing, manufacturing and supplying state of the art QA/QC products and systems for the deep foundations industry. The company is headquartered in Cleveland, Ohio, USA, with offices and representatives worldwide. For additional information visit us at www.pile.com or contact info@pile.com.
